## WHY NAPA® TEMP COMPRESSORS

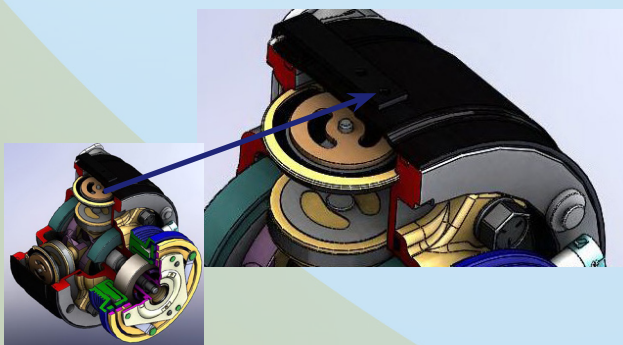

### O.E. FIT & FORM DEPENDABLE QUALITY

#### NAPA® TEMP R4 Unit

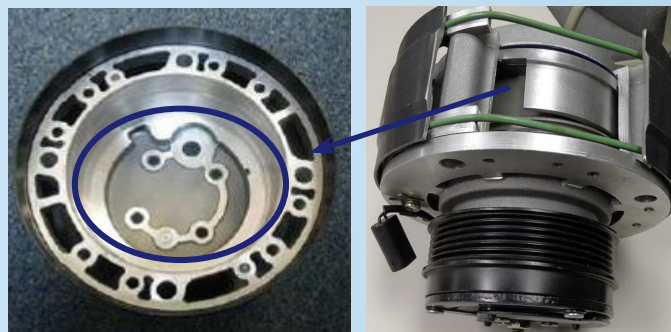

Manufactured in-house, NAPA® Temp's quality R4 unit is assembled with the highest standards to provide our customers with a unit they can depend on.

### THE R4 DIFFERENCE

#### NAPA® TEMP UNIT

NAPA® Temp employs a more durable piston yoke design with a wrap around discharge passage, allowing for larger volume (188cc).

#### COMPETITOR UNIT

The competitor R4 scroll design has less performance in volume (106cc) by using a smaller displacement along with a very small discharge passage.

#### NAPA® TEMP UNIT

NAPA® Temp's unit includes a large suction port for maximum volume to the compressor. Our smooth sealing surface insures proper sealing.

#### COMPETITOR UNIT

The competitor unit gives the illusion of a larger suction port, however, the amount of volume it takes in is less than our unit. A rough sealing surface may cause sealing washers to leak.
